SOURCE Slovenski Porocevalec.DISCUSSES MACHINE AND TOOL PRODUCTION

MACHINE FACTORY TO EXPAND -- Slovenski Porocevalec, No 133, 6 Jun 50

The "Jastrebac" Machine Factory in Nis acquired a 3,000-square-meter shop in 1948 and a foundry of equal size in 1949. This year the factory will acquire several smaller shops, warehouses, and auxiliary buildings.

Production in 1951 will be four times as great as in 1948.

The factory's main products are centrifugal pumps and large pumps used in flotation plants for nonferrous metals, especially in Trepca. The factory also recently began the production of 12 and 15-ton Worthington pumps, which have had to be imported thus far. They are used especially in hydroelectric power plants.

Recently, the factory produced its first series of special petroleum pumps, which previously were also imported. Among other things, the factory produces sucker-rod elevators, parts for stone crushers, and concrete mixers. Recently, the first gas generator for roasting ore was installed in the magnesite mine at Goles. It was made by the "Jastrebac" Factory. A similar generator will be installed in the "Sumadija" Mine.

In the near future, the factory will produce large wire-drawing and spinning machines for the new cable factory, which is under construction in Svetozarevo.

FACTORIES PRODUCE NEW PRODUCTS -- Slovenski Porocevalec, No 137, 10 Jun 50

Thus far, the "Ivo Lola Ribar" Heavy Tool Factory in Zeleznik has produced 40 different types of machine tools. This year the factory has begun the serial production of air and pneumatic hammers, eccentric presses, friction presses, presses for the cement industry, shears for heavy sheet metal, machinery for grinding and mixing cement, parts for petroleum drilling equipment, and large circular saws for the production of railroad ties.

Several important parts of the new saw were made by the "Prvomajska" and "Ventilator" factories in Zagreb, by the "Zmaj" Factory in Zemun, by the

"Vicko Krstulovic" Factory in Split, and by the "3 Maj" Factory in Rijeka. The machine factory in Nis recently produced a large 4,200-kilogram plow for removing stumps in clearing forests. Tests have shown that it can plow 58 acres in 8 hours and pull out 3,600 stumps of various sizes up to 0.5 meters in diameter. The plow is pulled with steel cables driven by two locomobiles.

FACTORY PRODUCES CONSTRUCTION MACHINERY -- Slovenski Porocevalec, No 131, 3 Jun 50

The machine shop of the "Ivo Lola Ribar" Heavy Tool Factory in Zeleznik is now producing parts for large construction machinery for use at the site of the hydroelectric power plant at Zvornik on the Drina River.

The first series of these machines will be completed in the middle of June. This series includes several scrapers, two large excavators, and a powerful crane. Such machinery has not been produced previously in Yugoslavia. For the production of individual parts of construction machinery, the factory had to modify its own production machines.

SCALE FACTORY MAKES VARIOUS TYPES OF SCALES -- Slovenski Porocevalec, No 131, 3 Jun 50

In addition to 60-ton bridge scales, small table, hanging, and balance scales, the scale factory in Celje will serially produce precision analytical scales. The factory will also construct a 100-ton scale for the Sisak Ironworks.
